

BRB COSTRUZIONI EDILI WORKS IMPROVE THE ENVIRONMENT AND ADDS COMFORT

# Turn-key building

With headquarters in the Milano area in Cassano D'Adda on the border with the Province of Bergamo, the land of a long and consolidated building tradition, Brb Costruzioni Edili Srl is a young company in continual growth that is made up of dynamic young people who are entrepreneurs and professionals. They are able to design and build construction that marries solidity and functionality with the use of sophisticated technologies. Thanks to its turnkey formula, Brb Costruzioni Edili is able to resolve any type of tasks: from design to working drawings and site supervision in civil, industrial, and commercial construction sites. In recent years it has de-

veloped sensitivity and experience in energy, bioclimatic, and environmental upgrading of existing building (ef-

ficacy and the efficiency of systems) both for energy savings as for the recovery of attics in condominiums in order to make them livable, with great added value for the building. Beginning with the energy diagnosis of the building, the process goes on to the study of a customized design solution that is thought out to optimize bio-climatic control of the open spaces and of the transition space. All this is done with the collaboration of designers and suppliers of consolidated experience and with constant interface with the client. The architecture must stimulate psycho-physical health of the community through the use of bio-compatible materials which are able to rescind to notions of thermal-hygrometric, acoustical, and lighting comfort. But above all it must integrate itself with the context with an eye to improving the quality of life and to protecting and bringing out the value of the environment.
